

## Downy mildew control products for ornamental plants

Downy mildew is distinctly different from powdery mildew in several areas. The topside of the leaf is usually yellow and blotchy and, in some cases, has very angular patterns that follow the lines of veins. On the underside of the leaf are small, dark green/grey patches of downy growth. The three main downy mildew species that affect nursery stock are Peronospora, Plasmopara and Bremia.

Avoid using products as successive treatments with the same FRAC codes. Repeated use of pesticides with the same mode of action increases the risk of resistance.

\* = Extension of Authorisation (EAMU) required for use in ornamental plant production. Go to [www.pesticides.gov.uk](http://www.pesticides.gov.uk) to download the information or contact the office for copies.

\*\* = Long-Term Arrangements for Extension of Use (LTAEU)

**Use plant protection products safely. Always read the label and product information before use**
