Information

POISONOUS PLANT CATEGORIES AND LABEL REQUIREMENTS

This list includes the labelling recommendations for each plant/plant group. Where only the genus is listed, all species should be labelled. Where genus and species is listed, all cultivars and subspecies should be labelled unless they are proven to be less toxic than the type shown. Please note that this information is subject to change from time to time.

CATEGORY A

The sale of these plants should be restricted and sales to the public discouraged. Display in retail areas should be supervised so that children do not have access. Individual plants should be labelled and customers should be informed of the potentially harmful nature of the plants by sales staff.

Rhus diversiloba, radicans, rydbergii striata, succedanea, toxicarium, verniciflua and vernix

CAUTION: Poison if eaten. Skin contact commonly causes severe blistering dermatitis.

CATEGORY B

These plants require a warning on the plant label and on any bed label or any other point of sale material. The required warning text is indicated.
